Summary

Backend Developer with hands-on experience architecting low-latency microservices, monorepo codebases, and distributed systems using Node.js, Java (Spring Boot), and TypeScript. Experienced in implementing ACID-compliant transactional ledgers, atomic order pipelines, and containerized cloud deployments on AWS.

Technical Skills

Languages: Java (Java 21), JavaScript, TypeScript, Python, Go, C

Frameworks & Libs: Spring Boot 3, Hibernate/JPA, React.js, React Native, Redux / Context API, Node.js, NestJS, Express.js, Jest/Unit Testing, Tailwind CSS

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2), Docker, Kubernetes, GitHub Actions, PM2, Git, Linux

Core Concepts: REST APIs, Database Design, System Monitoring, Agile, Scrum, CI/CD pipelines, Test-driven development, and GitFlow

Professional Experience

Software Developer Intern, TruesTech IT Solution Pvt Ltd. – Gurugram, Haryana

12/2025 – Present

Technologies: Node.js, Express, MySQL, MongoDB, Redis, Docker, PM2, AWS, Webhooks, Cryptography (AES-256 / RSA), Telegram Bot API

- Scaled core payment processing pipelines handling consistent **20+ transactions per second (TPS)** across multi-rail gateways, integrating idempotent webhook listeners to eliminate double-spend and dropped events under high-concurrency conditions.
- Structured ACID-compliant MySQL schemas with row-level locking for wallet ledger balances, combined with MongoDB for asynchronous audit logging and **AES-256/RSA payload encryption** with rate-limited OTP auth across all REST endpoints.
- Architected RBAC-enforced administrative and user dashboards with contextual UI layouts, granular transaction permissions, and an asynchronous batch reporting worker generating audit-ready PDF/CSV/Excel summaries without blocking primary API threads.
- Integrated an AI-driven Telegram monitoring bot backed by automated error pattern detection to flag unauthorized access, server anomalies, and transaction failures, reducing MTTR to **<5 minutes**.
- Deployed Node microservices via **PM2 Cluster Mode** on cloud instances, utilizing IPC process coordination and memory management to achieve continuous sub-20ms API response latency and maximum CPU core utilization.

Backend Developer Intern, AirFleet Managers – Gurugram, Haryana

02/2025 – 08/2025

Technologies: React, MongoDB, REST APIs, Node.js, Express, Tailwind CSS, EC2, PM2, Docker

- Designed an Aviation Asset Management Portal with multi-tenant data isolation and granular RBAC permission models, integrating low-latency direct and group messaging infrastructure for instant cross-organization communication.
- Authored an automated reporting engine rendering analytical PDFs, PPTs, and Excel sheets with embedded charts (keeping file sizes **<10MB**), alongside interactive real-time data visualizers and Gantt charts with client-side role filtering.
- Containerized Redis and core microservices via Docker, standardizing multi-environment CI/CD deployment pipelines and trimming base image sizes down to **<250MB**.
- Configured PM2 cluster mode across multi-core AWS EC2 instances, establishing request load balancing and process management to maintain sub-15ms response times and high system availability.

Web Developer Intern, Sanrachna Foundation – South West Delhi, Delhi

06/2024 – 07/2024

Technologies: React, MongoDB, REST APIs, Node.js, Express, Tailwind CSS, WordPress

- Redesigned a high-traffic publication portal that boosted user engagement by **30% for 10,000+ monthly active users**, creating gamified visual narratives that raised engagement duration by 40%.
- Automated content distribution pipelines with dynamic categorization and newsletter integrations, cutting manual publishing efforts by 50%.
- Spearheaded a centralized planning and editorial workflow tool that reduced publication turnaround times by 35%.

Projects

CreatorStore – Enterprise E-Commerce & Order Processing API

Technologies: Java 21, Spring Boot 3, Spring Data JPA, Hibernate, PostgreSQL, Maven, Swagger/OpenAPI, JUnit 5

- Architected a multi-tiered e-commerce backend in Spring Boot 3 using constructor-based dependency injection, centralized exception handling (@RestControllerAdvice), and structured DTO request/response mapping.
- Implemented atomic transactional checkout pipelines (@Transactional) with real-time stock validation, automated inventory deduction, and server-side price calculations to prevent order race conditions.
- Structured relational JPA/Hibernate data models with PostgreSQL, indexing product categories and keyword searches for efficient catalog querying.
- Integrated interactive OpenAPI 3 (Swagger UI) documentation and built automated test suites with JUnit 5 and H2 in-memory databases.

Education

SGT University, Gurugram, HR – Master of Computer Applications (MCA)
(Available for full-time job)

08/2025 – 08/2027

SGT University, Gurugram, HR – Bachelor of Computer Applications (BCA)

08/2022 – 08/2025

Languages

- English, Hindi
